LD30EPBR10BPxxIO - IO-Link

Photoelectric Laser sensor with BGS, FGS and IO-Link communication

Description

The LD30EPBR10BPxxIO are a part of the latest generation of high performance Photoelectric Laser sensors designed to solve challenging detection tasks due to Laser, Background Suppression, Foreground Suppression and Dual Detection features. The small light spot makes detection very precise.

The LD30EPBR10BPxxIO stainless steel sensors are manufactured with high-quality materials designed for harsh environments.

They are intended for use in environments where high-pressure cleaning (IP69K), cleaning agents and disinfectants are used daily, thanks to their ECOLAB approval.

The strong stainless steel (AISI316L) together with high-quality plastic materials like PMMA and PES sealings of FKM ensure a safe and excellent mechanical resistance.

The compact sensor design is ideally suited to confined spaces.

Benefits

- · Red laser class 1 assure reliable detection
- Red Laser BGS or FGS Long Range sensor with IOLink with an adjustable distance of 20 to 125 mm, either by Teach-button or via IO-Link.
- **Dual Detection mode** Combine Foreground detection with Diffuse Reflective detection.
- Triangulating sensing principle.
- Application functions: Dual Detection, Pattern Recognition, Speed & Length, Divider function and Object & Gap Monitoring.
- Neighbour Immunity, select up to 3 neighboring sensors.
- Easy customization to specific OEM requests by use of the build in IO-Link functionalities.
- The output can be operated either as a standard switching output or in IO-Link mode.
- Fully configurable via output IO-Link v 1.1. Electrical outputs can be configured as PNP / NPN / Push-Pull / External input, normally open or normally closed.
- Timer functions can be set, such as ON-delay, Offdelay, and one shot.
- Logging functions: Temperature, detecting counter, power cycle and operating hours.
- Detection modes Background suppression (BGS), single point, two point, windows and foreground suppression (FGS) mode.
- · Logic functions: AND, OR, XOR and Gated SR-FF.
- Analogue output: In IO-Link mode the sensor will generate 16 bit analogue process data output representing various selectable process data such as received signal level.

Applications

Detecting of transparent or translucent plastic bottles.

The detection distance is almost independent of the colour of the object to detect.

Dual Detection: A dual detection sensor works as a foreground suppression sensor combined with a diffuse reflective sensor. This sensing principle evaluates both the position change as well as the light intensity of the received light. This allow detection of eg. transparant PET bottles.

Pattern Recognition: An easy way to verify that a product is manufactured to the specification e.g. Furniture production where tabs or holes has to be with a defined pattern.

Speed and Length: Monitor the speed and length of an object on a conveyour for e.g. sorting on size.

Divider function: A de-central counting function that gives a signal when a preset count level is reached e.g. when a certain amount of items are packed in a carton box it ask for a new box.

Object and Gap Monitoring: Function that can sort out good objects and gaps between them so e.g. a packaging machine only reveive objects with the correct size and gaps.

Main functions

- The detection distance is almost independent of the colour of the object to detect.
- The sensor can be operated in IO-Link mode once connected to an IO-Link master or in standard I/O mode.
- · Measured sensing distance as process data.
- · Neighbour interference protection.
- Sensing distance by teach-button, teach by wire or by IO-link parameter.
- · Quality of Run and Quality of Teach result.
- Temperature data for preventive maintenance.
- · Front-end check for preventive maintenance.
- Dual Detection

Dual Detection

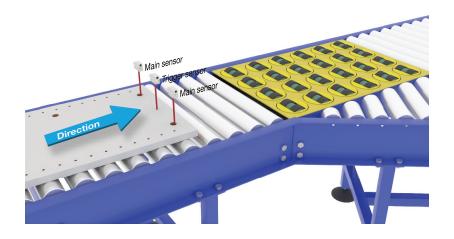

A standard Foreground Suppression sensor expects to see a background within a certain specified tolerance. An object is detected if the received light's position exceeds those tolerances set for the background.

A standard Diffuse Reflective (energized) sensor detects the intensity of the received light and if it exceeds a set threshold an object is detected.

A Dual Detection sensor works as a Foreground Suppression sensor combined with a Diffuse Reflective sensor. This sensing principle evaluates both the position change as well as the light intensity of the received light.

Pattern Recognition

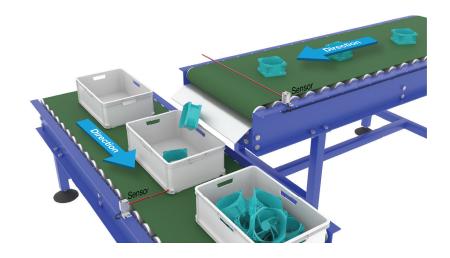

Function description	The Pattern recognition function detects a pattern (e.g. a row of holes or pins) and compares the order with a pre-teached reference pattern.	
Conditions	Two sensors (Main sensor and Trigger sensor) are needed for this function.	
Settings	 The Trigger sensor has to detect the full length of the body that contains the pattern. The Main sensor has to be aimed at the e.g. holes or pins that constitute the pattern. 	

Speed and Length

Function description	This function is designed to monitor the length of an object as well as the speed of a conveyour belt. The actual value of the length in [mm] and the speed in [mm/s] are directly available on the IO-Link master.	
Conditions	Two sensors (Main sensor and Trigger sensor) are needed for this for	
Settings	Distance between sensors.	25 150 mm Factory settings: 100 mm

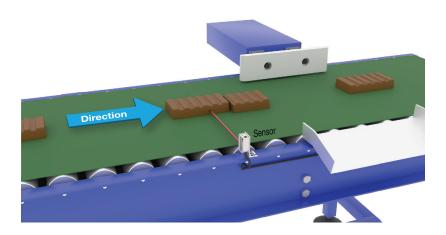

Divider function

Function description	This function can be used to e.g. monitor how many items are packed into a carton box. Once the preset number is reached the sensor gives an output so the full box can be replaced.	
Conditions	Only one sensor is needed for this function.	
	A counter value must be set in the sensor.

	Counter IIIIII.	Factory settings: 5

Object and Gap Monitoring

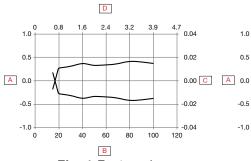

Function description	This function is designed to monitor, that the length of an object and the gap between the following object on a conveyer belt, are within certain limits.	
Conditions	Only one sensor is needed for this function.	
	An acceptable minimum and maximum time [ms] must be set for both the object size and a gap size between two objects represented by the time it takes to pass the sensor.	
	Object minimum time.	1060 000 ms Factory settings: 500 ms
Settings	Object maximum time.	1060 000 ms Factory settings: 10 000 ms
	Gap minimum time.	1060 000 ms Factory settings: 500 ms
	Gap maximum time.	1060 000 ms Factory settings: 10 000 ms
Outputs	Output 1 is active when an object is outside the set limits. Output 2 is active when the gap between two objects is outside the set limits.

Approvals and markings

General reference	Sensor designed according to EN60947-5-2		
MTTF _d	129.2 years	EN ISO 13849-1, SN 29500	
CE-marking	CE		
Approvals	CUL us (UL508) CONTROL (UL508) FDA accession number: 2220061-000		
	EC@LAB°	Topax 56, Topaz AC1, Topaz MD3, Topaz CL1, Topactiv OKTO, P3-hypochloran	
Other Approvals	LASER 1	Class 1 laser according to IEC 60825-1:2014 Complies with IEC / EN 60825-1:2014 and 21 CFR 1040.10 1040.11 except for deviations pursuant to Laser Notice No. 56, dated January 19, 2018	

IO-Link

IO-Link revision	1.1
Transmission rate	COM2 (38.4 kbaud)
SDCI-Norm	IEC 61131-9
Profile	Smart sensor profile 2nd edition, common profile
Min. cycle time	5 ms
SIO mode	Yes
Min. master port class	A (4-pin)
Process data length	32 bit

Delivery contents and accessories

Delivery contents

- · Photoelectric switch: LD30EPBR10BPxxIO
- · Laser safety note
- Mounting bracket: APD30-MB1
- Packaging: Carton box

Accessories

- Mounting bracket: APD30-MB2 to be purchased separately
- Connector type: CO..54NF..W series to be purchased separately
