

Model Number

NJ1,5-18GM-N-D-V1

Features

- 1.5 mm flush
- Compression proof up to 350 bar, dynamic on active surface
- Usable up to SIL 2 acc. to IEC 61508

Application

Note

Please refer to the technical information about this product at www.pepperlfuchs.com. This information describes the necessary geometry of the installation space!

Accessories

V1-G

Female connector, M12, 4-pin, field attachable

V1-W

Female connector, M12, 4-pin, field attachable

V1-W-N-2M-PUR

Female cordset, M12, 2-pin, NAMUR, PUR cable

V1-G-N-2M-PUR

Female cordset, M12, 2-pin, NAMUR, PUR cable

Technical Data

General specifications Switching function Output type

	· · · · · · · · · · · · · · · · · · ·				
	Switching function		Normally closed (NC)		
	Output type		NAMUR		
	Rated operating distance	s _n	1.5 mm		
	Installation		flush		
	Assured operating distance	sa	0 1.22 mm		
	Reduction factor r _{Al}		0		
	Reduction factor r _{Cu}		0		
	Reduction factor r ₃₀₄		0.85		

Nominal ratings

•		
Nominal voltage	Uo	8.2 V (R _i approx. 1 kΩ)
Switching frequency	f	0 400 Hz
Hysteresis	Н	typ. %
Current consumption		
Measuring plate not detected		> 3 mA

Measuring plate detected Limit data

Operating pressure 350 bar (5076.4 psi)

Ambient conditions Ambient temperature

-25 ... 85 °C (-13 ... 185 °F) Mechanical specifications

Connection type Housing material Connector M12 x 1, 4-pin Stainless steel 1.4305 / AISI 303 Sensing face Ceramic

 $\leq 1 \text{ mA}$

Degree of protection IP67 41.81 g Mass General information

EN 60079-0:2012+A11:2013 EN 60079-11:2012 Ignition protection "Intrinsic safety" Use is restricted to the following stated conditions

NJ1,5-18GM-N-D..

 \leq 50 nF; a cable length of 10 m is considered.

 \leq 60 μH ; a cable length of 10 m is considered.

The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual. The EU-type examination certificate has to be observed. The special conditions must be adhered to!

The ATEX directive and therefore the EU-type examination certificates apply in general only to the use of electrical apparatus under atmospheric conditions. The use in ambient temperatures of > 60 °C was tested with regard to hot surfaces

by the mentioned certification authority.

If the equipment is not used under atmospheric conditions, a reduction of the permissible minimum ignition energies may have to be taken into consideration.

Details of the correlation between the type of circuit connected, the maximum permissible ambient temperature, the temperature class, and the effective internal reactance values can be found on the EC-type examination certificate.

Laws and/or regulations and standards governing the use or intended usage goal must be observed. The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety. If the Ex-related marking is printed only on the supplied label, then this must be attached in the immediate vicinity of the sensor. The sticking surface for the label must be clean and free from grease. The attached label must be legible and indelible, including in the event of possible chemical corrosion.

No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.

The connecting parts of the sensor must be set up in such a way that degree of protection IP20, in accordance with IEC 60529, is achieved as a minimum.

When using the device in a temperature range of -60 $^{\circ}$ C to -20 $^{\circ}$ C, protect the sensor against the effects of impact by installing an additional enclosure. The information regarding the minimum ambient temperature for the sensor as provided in the datasheet must also be observed.

Electrostatic charges must be avoided on the mechanical housing components. Dangerous electrostatic charges on the mechanical housing components can be avoided by incorporating these in the equipotential bonding.

NJ1,5-18GM-N-D..

 \leq 50 nF; a cable length of 10 m is considered.

 $\leq 60~\mu H$; a cable length of 10 m is considered.

The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual.

The EU-type examination certificate has to be observed.

The ATEX directive and therefore the EU-type examination certificates apply in general only to the use of electrical apparatus under atmospheric conditions.

The use in ambient temperatures of > 60 °C was tested with regard to hot surfaces by the mentioned certification authority.

If the equipment is not used under atmospheric conditions, a reduction of the permissible minimum ignition energies may have to be taken into consideration.

Details of the correlation between the type of circuit connected, the maximum permissible ambient temperature, the surface temperature, and the effective internal reactance values can be found on the EC-type-examination certificate.

The maximum permissible ambient temperature of the data sheet must be noted, in addition, the lower of the two values must be maintained.

Laws and/or regulations and standards governing the use or intended usage goal must be observed.

The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety.

If the Ex-related marking is printed only on the supplied label, then this must be attached in the immediate vicinity of the sensor. The sticking surface for the label must be clean and free from grease. The attached label must be legible and indelible, including in the event of possible chemical corrosion.

No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.
