HUBBELL® TAYMAC® UPC Vendor Number 092326 or 050169.

Where applicable, HUBBELL® TAYMAC® products are engineered in accordance with the standards established by Underwriters Laboratories and the Canadian Standards Association. Dimensional data listed in this catalog is intended for general reference with broad tolerance limits.

2020 NEC®

When specifying HUBBELL® TAYMAC® Weatherproof boxes and covers, consult the requirements of the National Electrical Code®, Section 314.16 (B) and 406.9 (B). Section 314.16 (B) details the NEC® requirements for the maximum number of conductors allowed for a HUBBELL® TAYMAC® Weatherproof installation. Article 406.9 (B) provides details on the NEC® requirements for receptacles being used in wet locations.

For your convenience, we have reprinted the pertinent NEC® sections. In all cases, consult your local electrical code and inspector interpretation.

Wiring Capacity: HUBBELL® TAYMAC® Weatherproof Boxes and Extensions

Maximum Number of Conductors or Minimum Size Box (Article 314.16 (B))

The purpose of Section 314.16 (B) is to determine the maximum conductor count or the minimum box size required for the job. It also can be used to figure how many other conductors may be added without exceeding the Code-prescribed limit. Most applications have determined the number of conductors. The rules of Section 314.16 (B) are used to determine the Code recognized limit, or smallest box that may be installed.

Selection of any HUBBELL® TAYMAC® Weatherproof box or extension for use in any electrical circuit work must take into consideration the maximum number of wires permitted in the box. Safe electrical practice demands that wires not be jammed into boxes because of the possibility of nicks, abrasions, or other damage to the insulating material, creating the potential for ground faults or short circuits.

314.16 Number of Conductors in Outlet, Device, and Junction Boxes, and Conduit Bodies.

Boxes and conduit bodies shall be of an approved size to provide free space for all enclosed conductors. In no case shall the volume of the box, as calculated in 314.16(A), be less than the fill calculation as calculated in 314.16(B). The minimum volume for conduit bodies shall be as calculated in 314.16(C).

The provisions of this section shall not apply to terminal housings supplied with motors or generators.

Informational Note: For volume requirements of motor or generator terminal housings, see 430.12.

Boxes and conduit bodies enclosing conductors 4 AWG or larger shall also comply with the provisions of 314.28. Outlet and device boxes shall also comply with 314.24.

(A) Box Volume Calculations.

The volume of a wiring enclosure (box) shall be the total volume of the assembled sections and, where used, the space provided by plaster rings, domed covers, extension rings, and so forth, that are marked with their volume or are made from boxes the dimensions of which are listed in Table 314.16(A). Where a box is provided with one or more securely installed barriers, the volume shall be apportioned to each of the resulting spaces. Each barrier, if not marked with its volume, shall be considered to take up 8.2 cm³(1/2 in³) if metal, and 16.4 cm³ (1.0 in³) if non-metallic.

(1) Standard Boxes. The volumes of standard boxes that are not marked with their volume shall be as given in Table 314.16(A).

(2) Other Boxes. Boxes 1650 cm³ (100 in.³) or less, other than those described in Table 314.16(A), and non-metallic boxes shall be durably and legibly marked by the manufacturer with their volume(s). Boxes described in Table 314.16(A) that have a volume larger than is designated in the table shall be permitted to have their volume marked as required by this section.

(B) Box Fill Calculations. The volumes in paragraphs 314.16(B)(1) through (B)(5), as applicable, shall be added together. No allowance shall be required for small fittings such as

locknuts and bushings. Each space within a box installed with a barrier shall be calculated separately.

(1) Conductor Fill. Each conductor that originates outside the box and terminates or is spliced within the box shall be counted once, and each conductor that passes through the box without splice or termination shall be counted once. Each loop or coil of unbroken conductor not less than twice the minimum length required for free conductors in 300.14 shall be counted twice. The conductor fill shall be calculated using Table 314.16(B). A conductor, no part of which leaves the box, shall not be counted.

Exception: An equipment grounding conductor or conductors or not over four fixture wires smaller than 14 AWG, or both, shall be permitted to be omitted from the calculations where they enter a box from a domed luminaire or similar canopy and terminate within that box.

(2) Clamp Fill. Where one or more internal cable clamps, whether factory or field supplied, are present in the box, a single volume allowance in accordance with Table 314.16(B) shall be made based on the largest conductor present in the box. No allowance shall be required for a cable connector with its clamping mechanism outside the box.

A clamp assembly that incorporates a cable termination for the cable conductors shall be listed and marked for use with specific non-metallic boxes. Conductors that originate within the clamp assembly shall be included in conductor fill calculations covered in 314.16(B)(1) as though they entered from outside the box. The clamp assembly shall not require a fill allowance, but the volume of the portion of the assembly that remains within the box after installation shall be excluded from the box volume as marked in 314.16(A)(2).

(3) Support Fittings Fill. Where one or more luminaire studs or hickey are present in the box, a single volume allowance in accordance with Table 314.16(B) shall be made for each type of fitting based on the largest conductor present in the box.

(4) Device or Equipment Fill. For each yoke or strap containing one or more devices or equipment, a double volume allowance in accordance with Table 314.16(B) shall be made for each yoke

or strap based on the largest conductor connected to a device(s) or equipment supported by that yoke or strap. A device or utilization equipment wider than a single 50 mm (2 in.) device box as described in Table 314.16(A) shall have double volume allowances provided for each gang required for mounting.

(5) Equipment Grounding Conductor Fill. Where up to four equipment grounding conductors or equipment bonding jumpers enter a box, a single volume allowance in accordance with Table 314.16(B) shall be made based on the largest equipment grounding conductor or equipment bonding jumper entering in the box.

A 1/4 volume allowance shall be made for each additional equipment grounding conductor or equipment bonding jumper that enters the box, based on the largest equipment grounding conductor or equipment bonding conductor.

(C) Conduit Bodies.

(1) General. Conduit bodies enclosing 6 AWG conductors or smaller, other than short-radius conduit bodies as described in 314.16(C)(3), shall have a cross-sectional area not less than twice the cross-sectional area of the largest conduit or tubing to which they can be attached. The maximum number of conductors permitted shall be the maximum number permitted by Table 1 of Chapter 9 for the conduit or tubing to which it is attached.

(2) With Splices, Taps, or Devices. Only those conduit bodies that are durably and legibly marked by the manufacturer with their volume shall be permitted to contain splices, taps, or devices. The maximum number of conductors shall be calculated in accordance with 314.16(B). Conduit bodies shall be supported in a rigid and secure manner.

(3) Short Radius Conduit Bodies. Conduit bodies such as capped elbows and service-entrance elbows that enclose conductors 6 AWG or smaller, and are only intended to enable the installation of the raceway and the contained conductors, shall not contain splices, taps, or devices and shall be of an approved size to provide free space for all conductors enclosed in the conduit body.

406.9 Receptacles in Damp or Wet Locations.

(A) Damp Locations. A receptacle installed outdoors in a location protected from the weather or in other damp locations shall have an enclosure for the receptacle that is weatherproof when the receptacle is covered (attachment plug cap not inserted and receptacle covers closed).

An installation suitable for wet locations shall also be considered suitable for damp locations.

A receptacle shall be considered to be in a location protected from the weather where located under roofed open porches, canopies, marquees, and the like, and will not be subjected to a beating rain or water runoff. All 15- and 20-ampere, 125- and 250-volt nonlocking receptacles shall be a listed weather-resistant type.

Informational Note: The types of receptacles covered by this requirement are identified as 5-15, 5-20, 6-15, and 6-20 in ANSI/NEMA WD 6-2016, Wiring Devices — Dimensional Specifications.

(B) Wet Locations.

(1) Receptacles of 15 and 20 Amperes in a Wet Location. Receptacles of 15 and 20 amperes, 125 and 250 volts installed in a wet location shall have an enclosure that is weatherproof whether or not the attachment plug cap is inserted. An outlet box hood installed for this purpose shall be listed and shall be identified as “extra-duty.” Other listed products, enclosures, or assemblies providing weatherproof protection that do not utilize an outlet box hood need not be marked “extra duty.”

Informational Note No. 1: Requirements for extra-duty outlet box hoods are found in ANSI/UL 514D-2016, Cover Plates for Flush-Mounted Wiring Devices.

“Extra duty” identification and requirements are not applicable to listed receptacles, faceplates, outlet boxes, enclosures, or assemblies that are identified as either being suitable for wet locations or rated as one of the outdoor enclosure-type numbers of Table 110.28 that does not utilize an outlet box hood.

Exception: 15- and 20-ampere, 125- through 250-volt receptacles installed in a wet location and subject to routine high-pressure spray washing shall be permitted to have an enclosure that is weatherproof when the attachment plug is removed.

All 15- and 20-ampere, 125- and 250-volt nonlocking-type receptacles shall be listed and so identified as the weather resistant type.

Informational Note No. 2: The configuration of weather resistant receptacles covered by this requirement are identified as 5-15, 5-20, 6-15, and 6-20 in ANSI/NEMA WD 6-2016, Wiring Devices — Dimensional Specifications.

(2) Other Receptacles. All other receptacles installed in a wet location shall comply with 406.9(B)(2)(a) or (B)(2)(b).

(a) A receptacle installed in a wet location, where the product intended to be plugged into it is not attended while in use, shall have an enclosure that is weatherproof with the attachment plug cap inserted or removed.

(b) A receptacle installed in a wet location where the product intended to be plugged into it will be attended while in use (e.g., portable tools) shall have an enclosure that is weatherproof when the attachment plug is removed.

(C) Bathtub and Shower Space.

Receptacles shall not be installed within a zone measured 900 mm (3 ft) horizontally and 2.5 m (8 ft) vertically from the top of the bathtub rim or shower stall threshold. The identified zone is all-encompassing and shall include the space directly over the tub or shower stall.

Exception: In bathrooms with less than the required zone the receptacle(s) shall be permitted to be installed opposite the bathtub rim or shower stall threshold on the farthest wall within the room.

(D) Protection for Floor Receptacles.

Standpipes of floor receptacles shall allow floor-cleaning equipment to be operated without damage to receptacles.

(E) Flush Mounting with Faceplate.

The enclosure for a receptacle installed in an outlet box flush-mounted in a finished surface shall be made weatherproof by means of a weatherproof faceplate assembly that provides a watertight connection between the plate and the finished surface.

General Features and Benefits

HUBBELL® TAYMAC® Weatherproof products all offer these features and benefits:

- Rugged seamless die cast construction that will not allow entry of moisture
- Reinforced connector outlets to provide a secure mechanical installation
- State-of-the-art powder coat paint for maximum weatherability and scratch resistance
- Bilingual instructions provided with every product
- Installation hardware and ground screws included where applicable
- Shrink-wrap packaging that keeps all components together
- UPC-A barcoding to help lower transaction costs

Refer to the pages that follow for more specific information about HUBBELL® TAYMAC® products.

Calculate The Minimum Size Box

Section 314-16(B) describes in detail the method of counting wires, as well as clamps, fittings, or devices (i.e., switches, receptacles, combination devices) — by establishing an equivalent conductor-value for each. These values are added together to get a total number of conductors. The minimum size box is the smallest one in cubic inch size that can accommodate that number of conductors.

Points to Remember:

- No matter how many ground wires come into a box, they only count as one conductor within the box.

- Any wire running unbroken through the box counts as one wire.
- Each wire coming into a splice device (crimp or twist-on type) is counted as one wire.
- Each wire coming into the box and connecting to a device counts as one wire of that size.
- Where devices are mounted in the box, the total conductor count must be increased by two for each mounting strap.

Example - TAYMAC® Weatherproof

To calculate the minimum internal volume needed for an enclosure to supply power to a single switch using #14/2 conductors, you must account for 2 conductors, one ground, and one switch - totaling 5 allowances. Table 314.16(B) of NFPA 70 National Electrical Code states that multiplying 5 times 2.00 for the #14 conductors, will require a minimum of 10.0 cubic inches.

Table 314.16(B), Volume Allowance Required per Conductor

Size of Conductor (AWG)	Free Space Within Box for Each Conductor	
	CM3	IN.3
18	24.6	1.50
16	28.7	1.75
14	32.8	2.00
12	36.9	2.25
10	41.0	2.50
8	49.2	3.00
6	81.9	5.00

1-Gang

Applications

- Designed to provide weatherproof protection while an outlet is in use

Product Features

- High-impact polycarbonate construction provides maximum durability
- Quick-Fit keyhole mounting system allows installation in under a minute
- Includes attached gasket and mounting hardware
- Universal Fit Adapter System Technology (U-Fast) for 16-in-1 configurations, comes pre-configured for GFCI
- Lockable tab (fits up to 1/8" shackle / Extra Duty covers fit up to 1/4" shackle)

Compliance

-  File E116141
- 2020 NEC® 406.9 (A) compliant
- 2020 NEC® 406.9 (B) compliant (Extra Duty)
- NEMA 3R rated

Non-Metallic Low-Profile Expandable In-Use Covers

1-Gang

Applications

- Expandable design for weatherproof protection while an outlet is in use

Product Features

- Revolutionary patented design expands from 1" to 3" for in-use needs
- 100% paintable surface
- Ultra rugged polycarbonate & synthetic neoprene rubber will not dry rot, crack or deteriorate in sunlight
- Includes attached gasket and mounting hardware
- Quick-Fit keyhole mounting system allows installation in under a minute
- Universal Fit Adapter System Technology (U-Fast) comes pre-configured for GFCI

Compliance

- cULus File E116141

Non-Metallic Flat Profile In-Use Recessed Enclosure

1-Gang Cover

Applications

- In-use weatherproof enclosures can be used in new or old work, and are compatible with common siding types and materials such as vinyl, wood, stucco, brick or block

Product Features

- Mounts horizontally or vertically
- Accommodates duplex, GFCI or round receptacle (not included)
- Universal Fit Adapter System Technology (U-Fast) comes pre-configured for GFCI
- Electrical box and siding flange included
- For all common siding types and materials (vinyl, wood, stucco, brick or block)
- Installation instructions and mounting hardware included

Outdoor Deck Outlet Covers

1-Gang Cover and Kit

Applications

- Provides safe, code-compliant way to add an outlet to raised outdoor floors
- Suitable for lights, fans, device chargers and other electric appliances
- Protects from rain or snow and overspray from sprinklers or hoses
- Cost effective upgrade for today's outdoor living

Product Features

- Provides convenient power access on raised wood or composite decks and porches
- Low profile design meets ADA standards, includes beveled edge and slip-resistant texture
- Heavy duty UV-resistant polycarbonate for durability even in harsh environments
- Cord hooks hold two power cords in place, including most 16 gauge grounded extension cords
- Fits standard duplex, decorator and GFCI receptacles
- Rain chamber and "drip loop" design provide two levels of in-use protection
- Pre-attached weatherproof gasket keeps water from entering around the self-closing lid

Outdoor Comforts™
Enhance Your Outdoor Space!

DOCK320 kits also include outdoor box, gasket and GFCI receptacle

Outdoor Freestanding Post Device Enclosures

ParkPost Outdoor Power Enclosure

Applications

- Direct-bury freestanding post is a stylish solution for plug-in power access in yards and other outdoor living spaces such as patios, spas, outdoor kitchens, shade structures, fire pits and more
- Convenient means to have power outlets positioned away from a home or building or near structures if an exterior wall mounted device and cover is not ideal or practical

GFCI included with kits

Product Features

- Ideal for prominent locations rather than hidden away like typical outdoor boxes & covers
- Unique slide cover design provides easy access to outlets and retains stylish appearance even with cords plugged in
- Accommodates two power cords including most 16-gauge grounded extension cords
- Base models include adapters to install standard duplex, decorator, GFCI, or single round receptacle
- Kit models include Hubbell tamper-resistant weather-resistant 15A GFCI receptacle

Non-Metallic Receptacle / Cover Combos and Complete Kits

In-Use Cover Combos and Complete Kits

Applications

- Receptacle and cover combos for use whenever weatherproof protection is required while receptacle is in use

Product Features

- High quality Hubbell WR/TR device included
- Quick-Fit keyhole mounting system allows cover installation in under a minute
- Universal Fit Adapter System Technology (U-Fast) comes pre-configured for GFCI
- Includes attached gasket and hardware
- Lockable tab fits full-size padlock (up to 1/4" shackle)
- Installation instructions and mounting hardware included

CODEGUARD®

Weatherproof confidence with the latest code compliant, Extra-Duty TayMac covers and weather-resistant, tamper-resistant Hubbell Pro receptacles in one package.

Horizontal or Vertical Mount

Receptacle / Metal Cover Combos and Complete Kits

In-Use Metal Cover Combos and Complete Kits

Applications

- Receptacle and metal cover combos for use whenever weatherproof protection is required

Product Features

- High quality Hubbell WR/TR device included
- Heavy duty die-cast metal construction
- Includes gasket and mounting hardware
- Durable powder coat finish
- Lockable tab fits full-size padlock
- Includes receptacle and cover

Compliance

-  File E313240
- 2020 NEC® 406.9 (B) compliant (Extra Duty)
- NEMA 3R rated

RaynGuard® In-Use Metal Covers

Applications

- Designed to provide weatherproof protection while an outlet is in use

Product Features

- Heavy duty die-cast metal construction
- Meets or exceeds Extra Duty® specifications
- Quick-Fit keyhole mounting system allows cover installation in under a minute
- Includes gasket and mounting hardware
- Universal Fit Adapter System Technology (U-Fast) comes pre-configured for GFCI
- Durable powder coat finish
- All RaynGuard® covers include integrated cord catch with rain chamber for splash protection
- Lockable tab fits full-size padlock (up to 9/32" shackle)

Compliance

-  File E212332
- 2020 NEC® compliant
- NEMA 3R rated

Combo (Rigid/IMC or EMT) Bodies

Applications

- For use with threaded rigid/IMC or EMT for pulling access or to split a run into multiple directions. Removable cover included with complete assemblies allow access for maintenance and making taps and splices to conductors.

Product Features

- Durable die-cast aluminum construction
- Premium powder coat finish
- Combination head set screws
- Complete assemblies include a NBR synthetic rubber gasket and a stamped aluminum cover with combination head screws

Compliance

-  File E212332
- 2020 NEC® compliant
- NEMA 3R rated

Conduit Body Covers

Applications

- For use with TayMac threaded Rigid/IMC, EMT, or Combo conduit bodies.

Product Features

- Covers made of durable stamped steel or aluminum construction
- Retained combination head screws included with covers
- Gasket made of NBR synthetic rubber

Compliance

-  File E212332
- 2020 NEC® compliant
- NEMA 3R rated
